

**RAJIV GANDHI COLLEGE OF ENGINEERING AND
TECHNOLOGY**

COMPUTER SCIENCE AND ENGINEERING

ASSIGNMENT - 1

Prepared by: MOHAMED B SIRATUDEEN

Reg No : 22TD0053

Subject Name : E-Business

Subject Code : CSE63

Year/Sem/Sec : Y3 / S6 / B

Date of Submission: 28/2/2025

Unit : I

Teacher's Sign :

Department Vision and Mission

Vision:

Cultivate student as technocrats, researchers and entrepreneurs in the field of computer science and engineering.

Mission:

- + To impact quality education in computer science and Engineering by means of learning techniques and value added courses.
- + To inculcate professional excellence and research culture by encouraging projects in cutting-edge technologies through industry interactions.
- + To build leadership skills, ethical values and team work among the students.
- + To strengthen the collaboration of department and industry through internship, mentorships and professional body activities.

2 Marks

- + E-commerce can be defined as a modern business methodology that addresses the needs of organisations, merchants and consumers to cut costs while improving the quality of goods and services and increasing the speed of service delivery.

11 marks

1. VARIOUS TECHNOLOGY ADOPTED IN MARKET PLACE

Electronic Data Interchange

* EDI is the exchange of well-defined business transactions in a computer-processable format.

EDI provides a collection of standard message formats to exchange data between organisation computers via any electronic device.

* In 1979, the American National Standard Institute (ANSI) electronic Data interchange to develop uniform national standards of electronic interchange of business transactions.

On-line Networks and Services:

* Online services provide access to information entertainment, communication and transactions growth. In general, this term refers to networks by companies such as American online, computer serve and prodigy.

* The public switched telephone network (PSTN) is the typical distribution system, cable networks, satellite, wireless networks and the unused.

* Portion of FM radio and broadcast TV signals may also be used. it also include other specialized (commercial) Network.

CD-ROM and Hybrid

- * The multimedia and storage capabilities of CD-ROM's and the growth in the penetration of CD-ROM drives in both business and home PCs and the reasons why business to business and consumer markets sought to use the CD-ROM as a marketing vehicle in the recent past.
- * CD-ROMs can store large amounts (650 MB or more) of data in text and/or graphical form.
- * Because of their cost-effectiveness, CD-ROM catalogues, with the products of either one or more multiple markets, have become popular.

The Internet - Web commerce.

- * The internet is quickly becoming a popular commercial domain for business and marketers. Driven by the advent of low-cost commercial point and click internet software and WWW browsers.
- * The fastest-growing part of the internet at this time is the WWW. The web's ease of access as well as its multimedia capabilities and downloadable applications (eg: with Java) enable marketers to create compelling and entirely advertising and marketing environment.
- * The internet offers an extensive and demographically attractive potential audience, especially for business-to-business markets.

Screen phones

- Screen phones are similar to regular phones but have advanced features, such as credit card readers, small screens and key pads that can be used for a variety of interactive, transaction and informative services.
- The key reasons include home banking, home shopping and electronic white pages.

KIOSKS:

- KIOSKS are displays used to provide merchandise information in a remote location, such as retail store or shopping mall.
- KIOSKS employ a variety of technologies to merchandise multimedia marketing information.
- However, kiosks have not proven to be an effective medium to support transaction based interaction.
- It seems that consumers are not comfortable with the technology or the process of buying merchandises through a kiosk.

Interactive Television and video dial Tone

- The Television is a ubiquitous electronic home appliance. Interactive television, when available enables customers to view advertising about specific products and place orders through the television screen using a remote control and a special set-top box attached to the cable television line in to the home.

- There has been interest in bringing this technology to the market in recent years.
- The key reason interactive television has generated interest among markets, technology developers, cable TV and telephone companies is that it has a vast potential audience.

WEB TV

- A new technology, called WebTV by some and interestingly by others was seeing deployment of press time.
- This approach is yet another vehicle of electronic commerce.
- Web TV illustrates the fusion or convergence of technologies, eliminating previous lines of demarcation.

Interactive Banking

- Many Banks are offering another form of electronic commerce known as interactive banking. This generally refers to interactive banking. This generally refers to the methods that allow these customers to conduct some of their bank business over the phone or with a PC using a touch-tone telephone, customers can check their account balance, pay bills, order statements and so forth.
- PC finance software such as Interests quicks also refer the links to banks that can accomplish the same tasks.
