MINI PROJECT

RAILWAY RESERVATION SYSTEM

Objective:

To develop a simple web-based **Railway Reservation System** using **HTML**, **CSS**, and **JavaScript**.

The system allows users to:

- View a list of available trains with details such as train number, destination, departure time, and seats available.
- Book a train ticket by entering their name and train number.
- View the list of booked tickets.
- Cancel an existing booking, which updates the available seat count.

All operations are handled on the client side (in the browser) without using any backend server or database.

Railway Reservation System
