

OUTPUT:

```
*C:\Users\kille\Dropbox\My F  x + v
enter the string(a+b)-(c-d)
equivalent infix to postfix is:ab+cd--
```

The screenshot shows a terminal window with a dark background. The title bar at the top indicates the file path `*C:\Users\kille\Dropbox\My F` and includes standard window controls (minimize, maximize, close). The terminal content shows a prompt where the user has entered the infix expression `(a+b)-(c-d)`. The program's output is `equivalent infix to postfix is:ab+cd--`, which represents the postfix notation of the input expression.
